The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 122-143 are rejected under 35 U.S.C. 102(e) as being anticipated by Lesniak et al (7,311,731).

Lesniak et al teaches delivering a material to different areas within the heart tissue, such as papillary muscle, to physically modify or alter the geometry, or "remodel" the heart to treat valve regurgitation (see abstract, column 17, line 33-column 18, line 45, Figs 13-16, 25a-25d). Lesniak et al also teaches the use of imaging using ultrasound. Lesniak et al teaches that the material can be made from many different materials including nitinol (column 19, lines 7-26).

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Macha, Cohen et al and Sabbah et al are cited to further show the state of the art.
